

ÔN TẬP CÁC PHÉP TÍNH VỚI PHÂN SỐ

Bài 1: Tính:

$$\frac{3}{7} + \frac{3}{8} = \underline{\quad} + \underline{\quad} = \underline{\quad}$$

$$\frac{5}{9} + \frac{4}{11} = \underline{\quad} + \underline{\quad} = \underline{\quad}$$

$$\frac{6}{7} + 5 = \underline{\quad} + \underline{\quad} = \underline{\quad}$$

$$\frac{8}{7} - \frac{4}{5} = \underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$4 - \frac{4}{11} = \underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$\frac{6}{7} - \frac{3}{10} = \underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$\frac{8}{7} \times \frac{3}{7} = \underline{\quad}$$

$$\frac{5}{9} \times \frac{4}{7} = \underline{\quad}$$

$$\frac{6}{7} \times \frac{4}{9} = \underline{\quad}$$

$$\frac{3}{7} : \frac{6}{5} = \underline{\quad} \quad \underline{\quad} = \underline{\quad}$$

$$\frac{5}{9} : \frac{4}{11} = \underline{\quad} \quad \underline{\quad} = \underline{\quad}$$

$$\frac{6}{7} : \frac{4}{9} = \underline{\quad} \quad \underline{\quad} = \underline{\quad}$$

$$\frac{6}{7} : \frac{3}{14} = \underline{\quad} \quad \underline{\quad} = \underline{\quad}$$

Bài 2: Tính giá trị biểu thức:

$$\frac{4}{5} + \frac{5}{6} - \frac{7}{10} = \underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$\frac{4}{5} \times \frac{5}{7} : \frac{4}{7} = \underline{\quad} \quad \underline{\quad} = \underline{\quad}$$

$$\frac{4}{5} \times \frac{7}{10} - \frac{3}{10} = \underline{\quad} - \underline{\quad} = \underline{\quad}$$

$$\frac{4}{5} : \frac{5}{6} + \frac{7}{10} = \underline{\quad} + \underline{\quad} = \underline{\quad}$$
