

# ELECTRICITY

1. Choose the correct answer.

- The different components in an electric circuit are:
  - a) A power source, electrical conductors, a toaster and a resistor.
  - b) Electrical conductors, a resistor, a switch and a power source.
  - c) A resistor, a switch, a power source and a battery.
- Bodies, about electrical charge, are normally:
  - a) Positive (+)
  - b) Negative (-)
  - c) Neutral
- Iron, aluminium, water, etc., are:
  - a) Conductor
  - b) Insulator
  - c) Transparent
- In an open circuit...
  - a) There are several ways for the current to flow.
  - b) There is one way for the current to flow.
  - c) There current is interrupted by a break.

2. Complete the following definition:

- Static electricity is \_\_\_\_\_
