Narrator: Have you ever thought about how much [ ] green space is in your city? Some cities have lots of [ ] parks and gardens, while others have more concrete than [ ]. Research shows that people who live near green space are often [ ] because they spend more time outside. But perhaps as you walk around your city you see that there are no parks or [ ] to play in. All you see are bridges, [ ], and sidewalks. You might think you need to live in a [ ] place to enjoy adventures outside your door. But that isn't true. Even urban areas can be explored. If you know where to look, there are signs of life in every city. You can even play a part in making—[ ]—your city green. If you give new life to a dying tree, it can give new life to your community. When you plant a seed in the ground, you may also be planting [ ] in the minds of those around you. As the tree grows, wildlife may follow. Birds can build nests in the tree, and [ ] can find food in the nearby flowers. As your space becomes greener, other people may want to [ ], until your mission is accomplished. How would you re-wild your environment?
