If the fractions both have the same **denominator**, it does not change.

$$\frac{3}{4} - \frac{1}{4} = \frac{2}{4}$$

Only subtract the top **numerator**.

Subtract to solve the problems below.

$\frac{2}{5} - \frac{1}{5} =$ ____ $\frac{3}{8} - \frac{2}{8} =$ ____ $\frac{6}{9} - \frac{2}{9} =$ ____

$\frac{2}{3} - \frac{1}{3} =$ ____ $\frac{4}{7} - \frac{3}{7} =$ ____ $\frac{2}{4} - \frac{1}{4} =$ ____

$\frac{6}{8} - \frac{1}{8} =$ ____ $\frac{3}{5} - \frac{1}{5} =$ ____ $\frac{5}{10} - \frac{3}{10} =$ ____

$\frac{5}{12} - \frac{4}{12} =$ ____ $\frac{4}{9} - \frac{2}{9} =$ ____ $\frac{4}{7} - \frac{3}{7} =$ ____

$\frac{7}{11} - \frac{2}{11} =$ ____ $\frac{3}{9} - \frac{2}{9} =$ ____ $\frac{6}{8} - \frac{1}{8} =$ ____
