[Blank yellow box]

is a chronic disease affecting the central nervous system. It causes abnormal brain activity which can lead to seizures.

people will experience memory loss/ confusion, behavior changes, speaking, walking and eating difficulties

it is more common in young children and older adults.

Above 65 years/ Women are more affected than men

have a stiff body / have noisy, difficult breathing/ Uncontrolled movements/ fall down/ suddenly become unresponsive or unconscious.

difficulty remembering newly learned information/ forgetting people's names, or the names of everyday things. ~getting lost in familiar places.

~anti-epileptic medications/ high healthy fats and low carb diet. Brain surgery

There is no cure/ Some medications to help with memory problems.

Treatment

Signs and symptoms

Epilepsy

Who does it affect?

What is it?

Alzheimer's
