

**Level 8 exam.**

**1. Fill the blanks as you listen to the song.**

**It had to be you by Frank Sinatra.**

It had to be you, it had to be you  
I wandered \_\_\_\_\_ and finally found, that somebody who  
\_\_\_\_\_ make me be true  
Could make me feel blue  
And even be glad just to be sad, \_\_\_\_\_ of you

Some others I've \_\_\_\_\_  
Might never be mean  
Might never be cross, or try to be boss  
But \_\_\_\_\_ wouldn't do

For nobody \_\_\_\_\_ gave me a thrill  
With all your faults, I love you \_\_\_\_\_  
It had to be you, \_\_\_\_\_ you  
It had to be you

Some others I've seen  
Might never be mean  
Might never be cross, or try to be boss  
But they wouldn't do

For nobody else gave me a thrill  
With all your \_\_\_\_\_, I love you still  
It had to be you, wonderful you  
It had to be you.

## 2. Fill the blanks as you listen to the following audio.

What makes people happier: money or having happy friends and neighbors? Researchers from Harvard University and the University of California, San Diego, have found an answer as part of a study.

Nicholas Christakis and James Fowler based the study on the emotional [ ] of almost five thousand people. They used information [ ] over a period of twenty years, until two thousand three, in the Framingham Heart Study. That study began sixty years ago in Framingham, Massachusetts, to learn more about the risks of heart attack and [ ].

The new study found that friends of happy people had a greater chance of being happy themselves. And the smaller the [ ] distance between friends, the larger the effect they had on each other's happiness.

For example, a person was twenty percent more likely to feel happy if a friend living within one and a half kilometers was also happy. Having a happy neighbor who lived next door increased an individual's chance of being happy by thirty-four percent. The effects of friends' happiness [ ] for up to a year.

The researchers found that happiness really is [ ]. Sadness also spread among friends, but not as much as happiness.

People removed by as much as three degrees of separation still had an effect on a person's happiness. Three degrees of separation means the friend of a friend of a friend.

The study showed that having an extra five thousand dollars increased a person's chances of becoming [ ] by about two percent. But the researchers found that the influence of a friend of a friend of a friend can be greater than that.

Another finding is that people who are [ ] or work together do not have as much of an effect on happiness as friends do.

The findings appeared in the British Medical Journal. The National Institute on Aging in the United States helped pay for the study.

The study is described as the first to demonstrate the indirect [ ] of happiness. In other words, that your emotions can be affected by someone you do not directly know.

Earlier studies by the two researchers described the effects of social networks on [ ] and efforts to stop smoking. The new study shows that happiness spreads through social networks like an emotional virus -- a virus people would be happy to [ ].
