cranium	Pelvic girdle	phalanges	humerus	femur	ribs

LIVEWORKSHEETS

The human body has many bones. The adult human skeleton is made up of 206 bones. Some of the bones are:

1. The skull or cranium which is used to form the head and protect the brain.
2. The spine that help out bodies to stand upright.
3. The ribcage is used to protect the heart and lungs.
4. The phalanges that are in our fingers and toes.
5. The humerus is the bone that is found in the upper arm area.
6. The femur, also called thighbone is the **upper bone of the leg.**
7. The pelvic girdle is used to protect the bladder.

Use the information above to answer the questions below.
