

INEQUALITIES IN DIFFERENT FORMS

Can you recognise the same inequality expressed in different forms: words, number line graphs or using algebraic symbols?

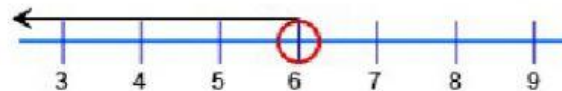

TASK 1 Match an inequality with its graph

Draw a line from each linear inequality to its matching number line graph.

a $3m > 18$

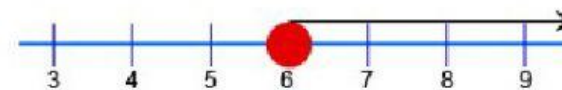

b $\frac{y}{2} \leq 3$

c $p - 2 \geq 4$

d $z + 4 < 10$

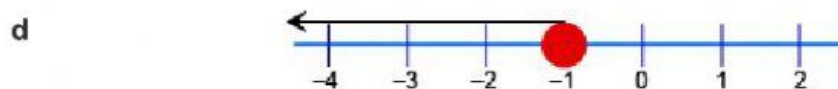

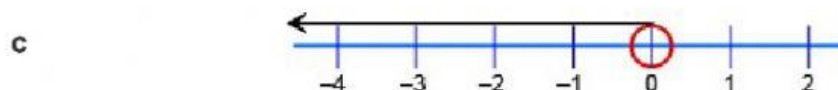

TASK 2 Drag the inequality to the correct number line graph

$y \geq 60$ OR $60 \leq y$

$y \leq -1$ OR $-1 \geq y$

$y > 24$ OR $24 < y$

$y < 0$ OR $0 > y$

TASK 3 Match a statement to a linear inequality

Draw a line from the linear inequality to its matching statement in words.

a $q > 18$

One quarter of a number is less than or equal to 18.

b $\frac{v}{4} \leq 18$

Five less than a number is greater than or equal to 18.

c $h - 5 \geq 18$

A certain number is greater than 18.
