

GERMY SITUATIONS

It is important to know how to wash your hands correctly. Germs are everywhere, but proper hand washing can keep them off of you and your body. Do you know the right way to wash your hands? It seems like a very simple thing, but most people do not wash their hands correctly. Soaps and detergents need about 15 seconds to do their job. If you rub soap on your hands, and then rinse the soap off immediately, you will not wash germs away. Follow these hand washing steps, and you'll be germ free in no time! 1) Turn on the water faucet and wet your hands. 2) Put soap on your hands and rub them together. Rub your hands front and back, and wash under your fingernails, too. Be sure to do this for 15 seconds. Slowly count to 15 or sing a short song to help you keep time. 3) Rinse the soap off by rubbing your hands under running water. 4) Dry your hands with a clean towel, and use the towel to turn off the faucet. By washing your hands correctly, you can prevent the spread of disease and make the world a healthier place.

Dry your hands with a clean towel, and use the towel to turn off the faucet.

Rub your hands (front & back) with soap for 15 seconds.
