Addition of Directed Numbers

Simplify each of the following expressions:

Example: 10 + 12 = 22	
1. -8 + 13 =	
2. 19 + (-8) =	
3. -12 + (-9) =	
4. +24 + (-16) =	
5. +7 + (16) =	
6. -31 + (+22) =	
7. 375 + (-217) =	
8. -295 + (-125)	

9. In Ontario, Canada the temperature last night was -15^0C. To our surprise when we woke up this morning the temperature increased by 22^0C. Calculate the new temperature it is this morning.

10. Carly had $576.00 on her credit card. She added a purchase of $718.00 to it. Calculate the balance that is left on her credit card.
