How Does Milk Arrive in the Shops?

LIVEWORKSHEETS

Date: _____

LO: To examine the journey of milk

The milk is taken to factories in a milk tanker to be packaged. It is kept cool in the tanker.	It is put into cartons and sold at the shops and supermarkets.
The milk is stored in storage tanks and tested for freshness. It is heated to kill any germs.	Milk is made in the udders of a cow. The farmer attaches milking lines to the udders and the milk is sucked from them.
