

Unit 8: energy

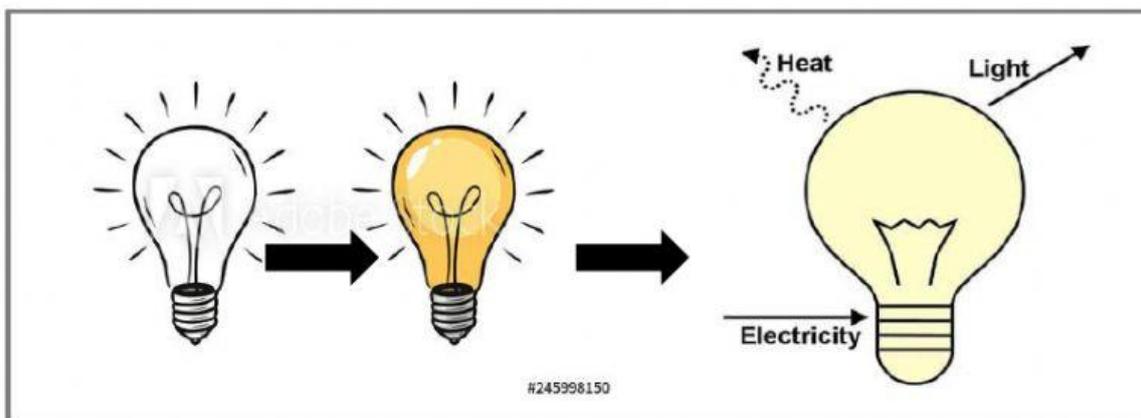

READ AND WATCH THE VIDEO

Energy is all around us. It makes things move and it also makes machines work.

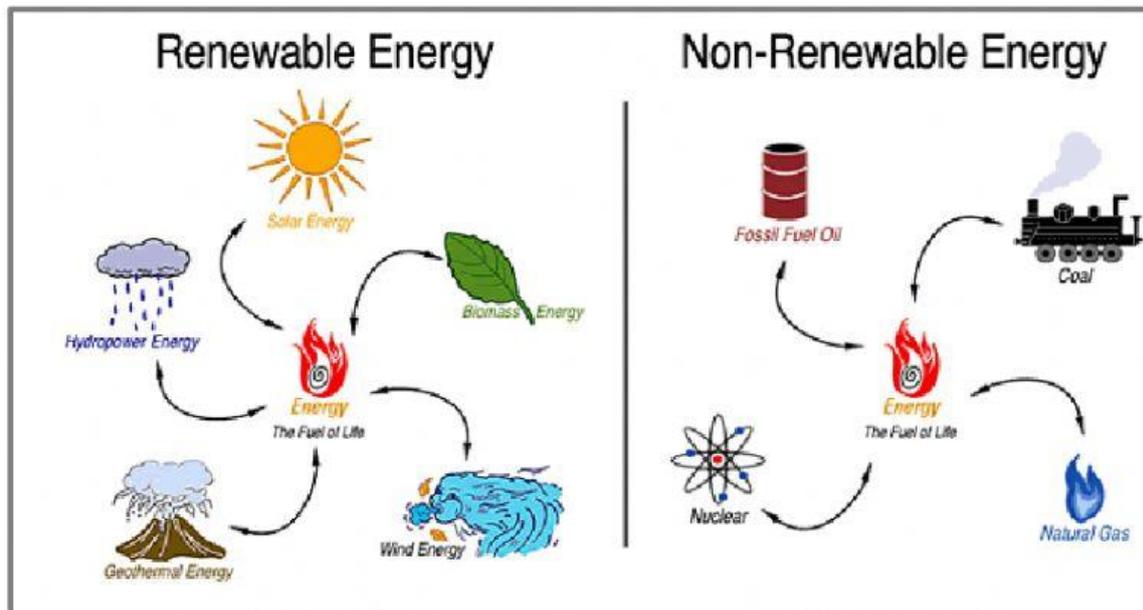

There are lots of types of energy. Such as:

<p>THERMAL ENERGY</p> 	<p>LIGHT ENERGY</p> 
<p>SOUND ENERGY</p> 	<p>ELECTRICAL ENERGY</p> 

We cannot create or destroy energy, but we can change it from one type to another. For example: when we switch on a light, electrical energy is transformed into light and thermal energy.

There are two types of energy sources:

All unlimited sources
present in nature.

All limited sources
present in nature.
