

## Different Homes

Where on Earth do you live? Where on Earth is your home?

The climate, plants, and animals make your biome your home.

The 1 desert is hot and dry

Not much can grow on the land

But the 2  walks through the sand. And the 6  runs all day long.

The 3  has no trees

It's cold but small flowers grow

And the 4  plays in the snow.

The 5  has tall, tall grass

It's dry and the wind is strong

The 7  is full of green trees

The sun shines warm and bright

But the 8  sleeps until night.
