

Name: _____ Year: _____

Adding Unlike Fractions

1) Add the fractions below:

$$\frac{2}{3} + \frac{1}{6}$$

But before that, find the equivalent fraction below:

$$\frac{2}{3} = \frac{\quad}{6}$$

Diagram showing the conversion of $\frac{2}{3}$ to an equivalent fraction with denominator 6. A red arrow points from the denominator 3 to the denominator 6, with "x ____" written above it. Another red arrow points from the numerator 2 to the numerator blank, with "x ____" written below it. A blue arrow points from the blank in the numerator to the first fraction in the final addition problem.

Lastly, add the fractions:

$$\frac{\quad}{6} + \frac{1}{6} = \frac{\quad}{\quad}$$

2) Add the fractions below:

$$\frac{7}{12} + \frac{1}{3}$$

But before that, find the equivalent fraction below:

$$\frac{1}{3} = \frac{\quad}{12}$$

x _____

Lastly, add the fractions:

$$\frac{7}{12} + \frac{\quad}{12} = \frac{\quad}{\quad}$$
