

AREA DEL CIRCULO

1. Calcula el área del círculo "O" es centro.

$$A = \boxed{} \pi$$

$$A = \boxed{} \pi \text{ m}^2$$

4. Halla el área de la región sombreada si "O" es centro.

$$A = \frac{\boxed{}}{\boxed{}} \pi$$

$$A = \boxed{} \pi \text{ m}^2$$

2. Calcula el área del círculo si su diámetro es 14m y "O" es centro.

$$A = \boxed{} \pi$$

$$A = \boxed{} \pi \text{ m}^2$$

5. Calcula el área de la corona circular (O: centro)

$$A = (\boxed{} - \boxed{}) \pi$$

$$A = \boxed{} \pi \text{ m}^2$$

3. Calcula el área de la región semicircular.

$$A = \frac{\boxed{}}{\boxed{}} \pi$$

$$A = \boxed{} \pi \text{ m}^2$$

6. Calcula el área del círculo "O" es centro.

$$A = \boxed{2\sqrt{3}} \pi$$

$$A = \boxed{} \pi \text{ m}^2$$
