WHAT ARE GERMS?

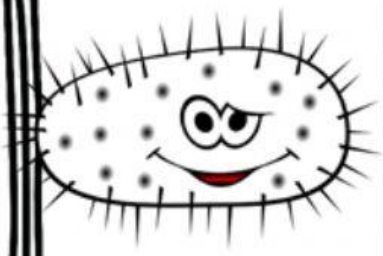

Choose the accurate answers. (Page 110)

They live in you and around you, but you (can't, can) see them. What are they? They're germs. Germs are (large, tiny) living things. You can see them only through a (microscope, lens). Some germs can make you (healthy, ill), so doctors work hard to learn more about them.

Germs like to live in (warm, cold), (dry, wet) and dark places. They get inside your body through your eyes, mouth and nose, and when you (kick, cut) yourself.

There is something we can do to stop germs. (Don't, Do) touch your eyes, mouth or nose with your hands. Germs hate (oil, soap) and water, so you should always (cut, wash) your hands before you eat.
