

NAME: \_\_\_\_\_

CLASS: 5

DATE : \_\_\_\_\_

SCIENCE YEAR 5  
TITLE : 8.2.3 CLOUDS AND RAIN

INSTRUCTIONS: Fill in the blanks with the correct word to relate the changes in states of matter for water with the formation of cloud and rain.

evaporation

Water vapour

clouds

condense

Water cycle

rain

The sun heats up the water on the surface of the Earth and turns it into

(1) \_\_\_\_\_.

The process is known as (2) \_\_\_\_\_.

The cold air up high in the atmosphere causes the water vapour to

(3) \_\_\_\_\_ and form tiny water droplets, which later will form

(4) \_\_\_\_\_.

The tiny water droplets join together to form large water droplets. When these water droplets become heavy, they fall to the ground in the form of (5) \_\_\_\_\_.

The rainwater falls to the surface of the Earth will flow into streams, rivers, lakes and seas. Then, the (6) \_\_\_\_\_ starts all over again.
