

Read the short article and answer: are the sentences below true or false?

“There is no place like home” and “My house is my castle” – two favorite sayings of the British about their attitude towards home. They spend most of their time at home behind closed doors. Most of the visits must be pre-approved. About 70% of Britons own houses, most of them have gardens and enjoy spending time with floriculture and lawn maintenance. Many houses, especially older ones, are surrounded by thorny hedges, symbolizing the British desire to protect privacy. Not only do the British love their homes, they are also completely crazy about their pets, and are also very concerned about the living conditions and the rights of wild animals. There are far more animal rights foundations in the country than in any other country in the world. Paradoxically, hunting wild animals is considered one of the favorite pastimes of the British. And driven fox hunting, which was the privilege of the nobility for many centuries, was banned quite recently. The British are completely tolerant of accents and mistakes made by foreigners in the English language because they really do not want to learn foreign languages considering themselves incapable of them. The best characteristics of British culture are indestructible politeness and attention to the needs of others.

1. They spend most of their time at home behind closed doors. **True / False**
