

# Plate Boundary activity

The type of crust that underlies the continents is called **continental crust**, while the type found under the oceans is called **oceanic crust**.

| Type of Boundary                                 | Plate Movement Image | What can happen there? | force |
|--------------------------------------------------|----------------------|------------------------|-------|
| <b>Convergent</b><br>(continental - continental) |                      |                        |       |
| <b>Convergent</b><br>(continental -oceanic )     |                      |                        |       |
| <b>Divergent</b>                                 |                      |                        |       |
| <b>Transform</b>                                 |                      |                        |       |
