

The earth, home of living beings.

Earth is the planet on which all living things that we know live, including human beings. It is one of the planets found in the solar system and it has unique characteristics that allow the existence of human life.

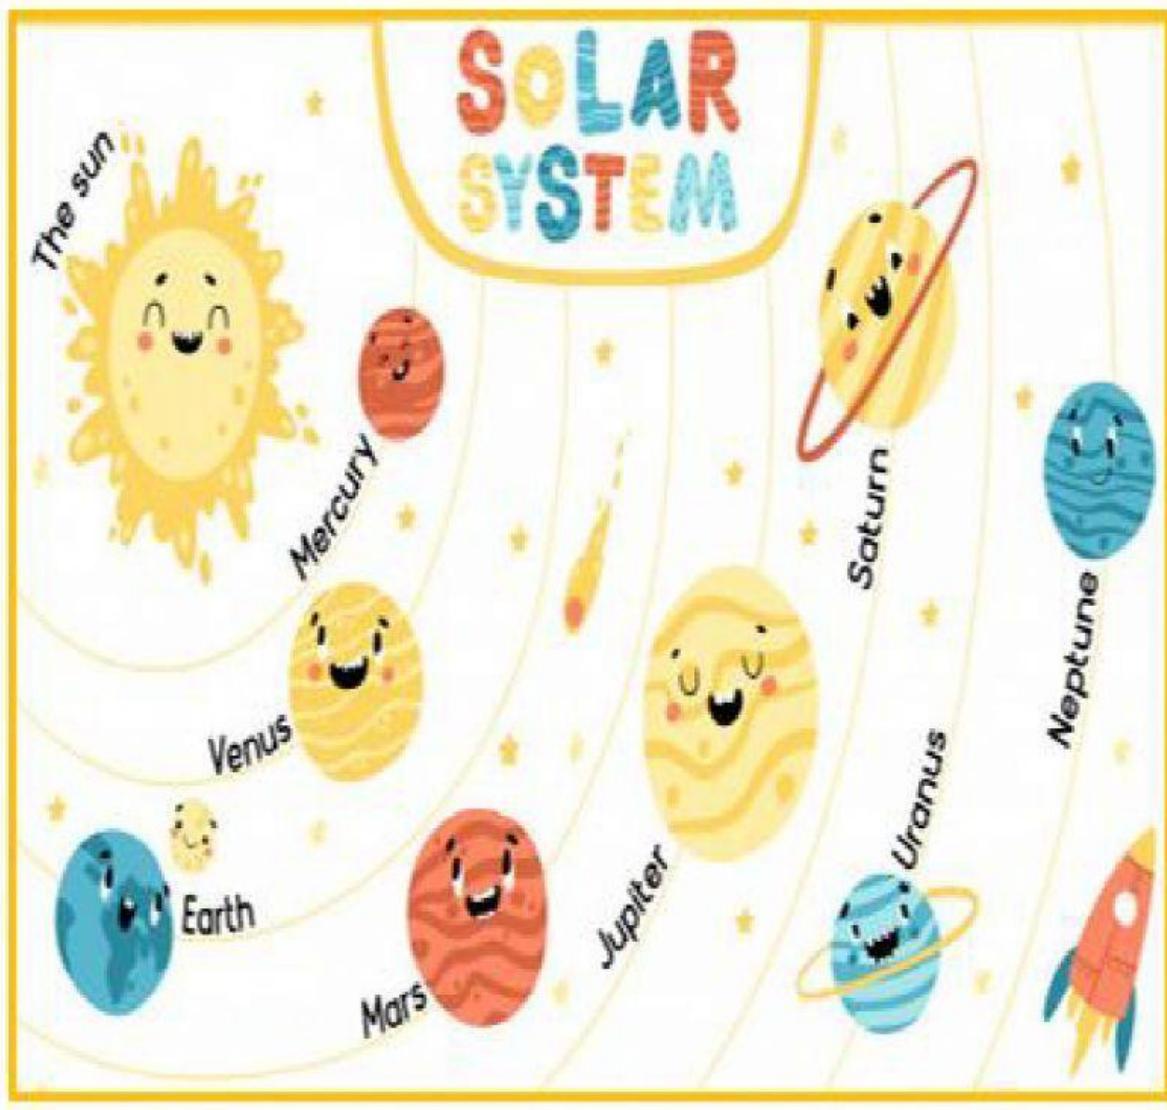

The structure of the earth:

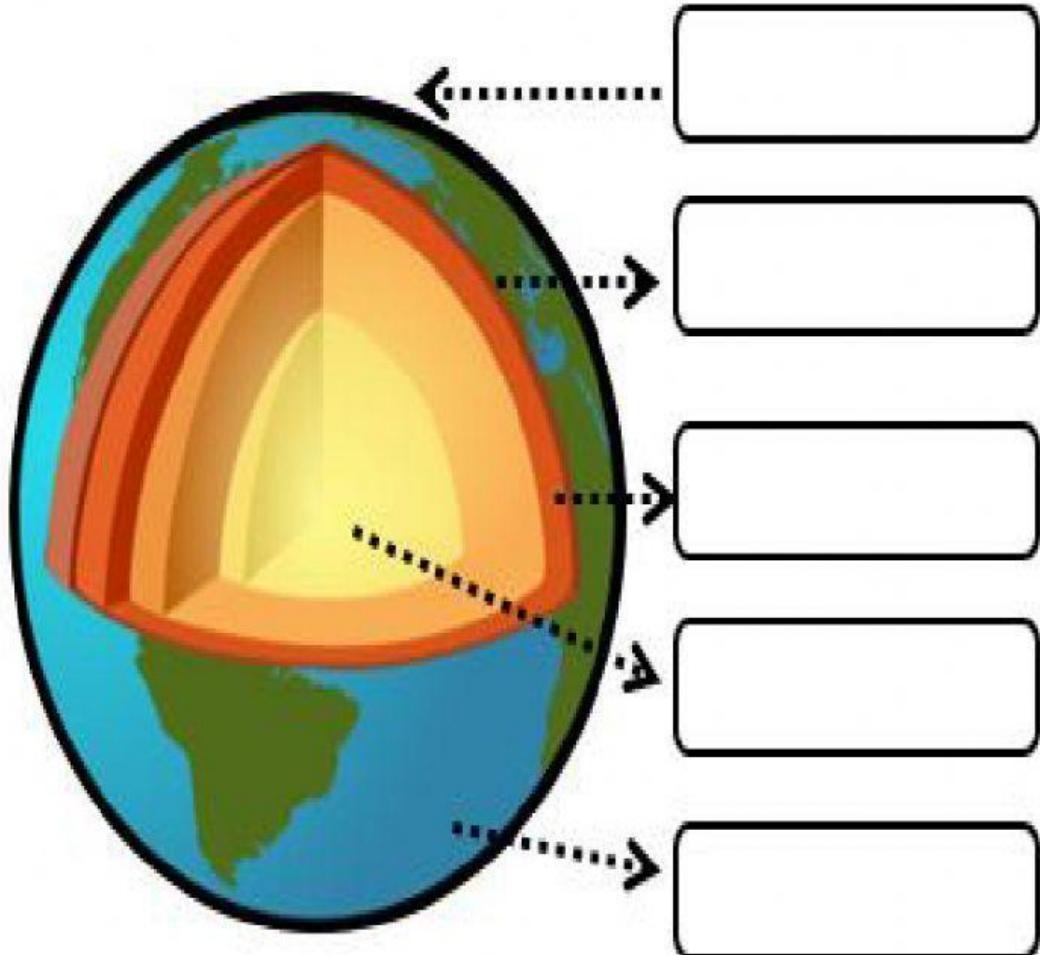

The earth is part of the solar system:

- * The solar system is a set of planets that revolve around a star, in a path called orbit; the solar system is made up of eight planets.
- * Planets are celestial bodies that revolve around the sun.

Feedback

1. Write the parts of the earth's internal structure and how you are committed to caring for it.
