

Think Addition to Subtract

Directions: Use the addition facts to check the difference.

$$9 - 4 = \square \text{ so } 4 + \square = 9$$

$$7 - 4 = \square \text{ so } 4 + \square = 7$$

$$12 - 8 = \square \text{ so } 8 + \square = 12$$

$$11 - 6 = \square \text{ so } 6 + \square = 11$$

Now, make up a problem of your own.

$$\square - \square = \square$$

so

$$\square + \square = \square$$
