Derivada de la función constante y lineal

Escribe en los espacios los valores correspondientes, para a completar el procedimiento de las derivadas

$y = 5 \quad \frac{d(\quad)}{dx} \quad y' =$

$y = 2 \quad \frac{d(\quad)}{dx} \quad y' =$

$y = x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = 2x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = 3x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = 4x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = 5x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = 6x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = 7 \quad \frac{d(\quad)}{dx} \quad y' =$

$y = 8x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = 9x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = 100 \quad \frac{d(\quad)}{dx} \quad y' =$

$y = -2x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = -3x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = -4x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = -5x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = -6x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = -7x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = -8x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = -9x \quad \frac{d(\quad)}{dx} \quad y' =$

$y = -10 \quad \frac{d(\quad)}{dx} \quad y' =$

$y = -9 \quad \frac{d(\quad)}{dx} \quad y' =$

$y = 14 \quad \frac{d(\quad)}{dx} \quad y' =$

$y = -17 \quad \frac{d(\quad)}{dx} \quad y' =$

$y = 30 \quad \frac{d(\quad)}{dx} \quad y' =$

$y = a^2 \quad \frac{d(\quad)}{dx} \quad y' =$
