Do Now – 10.19.2021 – RI 4.3_3 Explain events, concepts, and ideas in a scientific text, including what happens and how/why it happens. RI 4.5 Describe the Text Structure

Two Types of Sea Turtles

Green sea turtles and loggerhead sea turtles live along the beaches of the Atlantic and the Pacific oceans. Green sea turtles are endangered, meaning there are not many of them left in the world. Loggerheads are listed as threatened. This means loggerhead sea turtles are on their way to becoming endangered. Grass, algae, and other plants are what green sea turtles eat. Because of this, they are herbivores. Loggerhead sea turtles like to eat horseshoe crabs, clams, and mussels. Because they eat meat, loggerheads are carnivorous animals. Both the loggerhead and green sea turtles tend to stay close to the coastline.

a green sea turtle

a loggerhead sea turtle

How is the text above organized?

a. Compare/Contrast
b. Problem/Solution
c. Chronological Order
d. Cause/Effect

Why are loggerhead sea turtles called carnivorous?

a. Loggerhead sea turtles are called carnivorous because they eat plants.
b. Loggerhead sea turtles are called carnivorous because they live in the Atlantic Ocean.
c. Loggerhead sea turtles are called carnivorous because they eat meat.
d. Loggerhead sea turtles are called carnivorous because they swim in salt water.

According to the text, what is one-way green sea turtles and loggerhead sea turtles are similar?
