3.

All About Sharks

Sharks are mysterious creatures that have been around since the time of the dinosaurs. They live in oceans all over the world, and some can even be found in rivers and lakes.

One thing that makes sharks particularly unique is the fact that they have no bones. Their bodies are made up of **cartilage**, a tough fibrous substance that is much more flexible than bone.

4.

Types of Sharks

There are over 360 different types of sharks in the world today. Some of the most talked about sharks include the infamous great white shark, the bull shark, nurse shark, and the reef shark. The hammerhead shark is also commonly talked about because of its unique appearance.

5.

6.

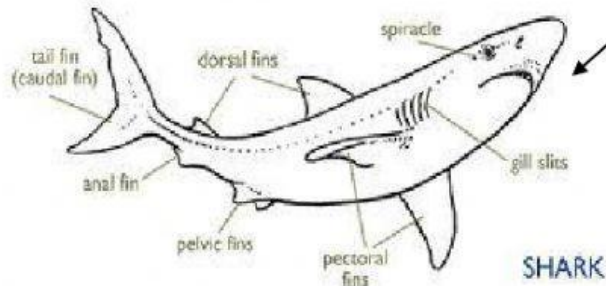

The hammerhead is a very aggressive shark. They are well known for their hunting and unique head shape.

Sharks

1.

2.

While different sharks have different body shapes, many of the sharks we typically think of look like the one above.

What They Eat

While the diet of a shark varies from type to type, one thing that is true for all sharks, is that they are all **carnivorous**, meaning that they eat meat.

7.

Some sharks, such as the tiger shark, the great white, and the mako shark prefer to feast on larger fish, squid, and other ocean animals. The great whites especially love to feast on sea lions.

Other sharks, such as the massive whale shark, are what we call filter feeders. They swim with their mouths open and feed on plankton and other small animals in the water.

Use the "Sharks" passage to answer questions 8 - 20.
