3) Find the slopes and y-intercepts of the lines below:

a) $y = -3x - 6$ b) $2x + 8y = 16$ c) $12x - 4y = 16$

4) Graph the functions using the slope-intercept method. Remember to put the equation into slope-intercept form if necessary. Identify the slope and the y-intercept.

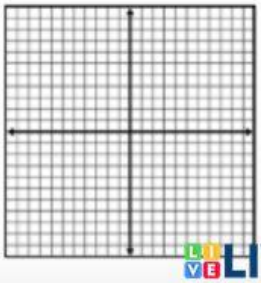

a) $y = x - 5$

slope_____ y-intercept_____

b) $y = -\frac{1}{2}x$

slope_____ y-intercept_____
