

Rewrite this text using passive verbs to replace the underlined active verbs. Only include the agent if you think it is important.

An expert (1) has completed a new study on Albert Einstein and she (2) will publish it next month in a journal on neurology. The study suggests that a uniquely shaped brain (3) may have influenced Einstein's extraordinary genius. When anthropologist Dean Falk and her team made a comparison with 85

'normal' human brains, (4) they found that Einstein's brain possessed some remarkable features.

The researchers were using 14 photos of the genius's brain which people (5) had only recently rediscovered. With permission from his family, scientists (6) removed and photographed Einstein's brain after his death in 1955. The National Museum of Health and Medicine (7) hold the photographs but people (8) had never fully investigated them before.

1. _____
2. _____
3. _____
4. _____
5. _____
6. _____
7. _____
8. _____
