Unit 4:
Sustainable Development

1. Read the following text and answer the questions below.

Climate change is one of the most worrying things for our planet. Many politicians and scientists say it is the biggest danger we face. I read almost every day that climate change is changing the Earth forever. Problems such as species of animal, fish, insect, frog, etc. are dying and becoming extinct. The ice caps in the Arctic and Antarctica are melting.

Our weather is changing so places are getting warmer, or colder, or are having more and stronger natural disasters. We all need to do our bit so that climate change does not destroy us. It's important to cut down on things that produce greenhouse gasses and harm the environment. These warm the planet and change the climate. Doing simple things like turning off lights, saving water and recycling paper all help.

2. Answer the questions according to the text.

a) Which is the biggest danger we face?
