Pseudocode

Create a plan using pseudocode where a user will enter password for account login. User can attempt multiple times for entering a correct password. See below text-based program. You can take help from this program for creating a pseudocode.

```
1. stored_pass = "password"
2. password = ""
3. pass_mismatch = stored_pass != password
4. while pass_mismatch:
5.       print("Enter your password:")
6.       password = input()
7.       pass_mismatch = stored_pass != password
8.
9. print("Access granted")
```

Use the space provided below to complete pseudocode plan.
