

BILINGUAL EDUCATIVE UNIT LICEO ALBONOR

SCIENCE 2ND QUIMESTER 1ST PARTIAL QUESTIONNAIRE FOR QUIZ

SCHOOL YEAR 2021-2022

STUDENT'S NAME:	
COURSE:	9 th JAIME ROLDOS / MANUELA CAÑIZARES
TEACHER:	LOURDES VELEZ
DATE:	

What are the Characteristics of Plants?

READ AND WRITE THE CORRECT WORD.

seed, cellulose, chloroplast, chlorophyll,

1.- nonliving substance that makes up the plant cell walls

2.- green pigment needed by a plant in order to make its own food

3.- structure in the cells of a green plant that store chlorophyll

4.- reproductive structure

READ AND COMPLETE USING THE CORRECT WORDS

spores, tissue, rhizoids, leaves, short

- A) Nonvascular plants Grow very _____, because they cannot transport water up the stem
 B) Nonvascular plants have no vascular _____ to transport nutrients up the stem
 C) They Have _____ instead of roots
 D) Nonvascular plants have no roots, stems, or _____
 E) They Have _____ instead of seeds

SELECT THE CORRECT ANSWER.

1.-These plants are.....

2.- These plants belong to the division of.....

3.- Bryophytes are _____ plants.

4.- Mosses and liverworts are examples of...

5.- Do bryophytes have true roots, stems, and leaves?

A) vascular

A) Bryophyta

A) simple

A) tracheophytes

A) Yes, They have

B) nonvascular

B)Tracheophyta

B) complex

B) bryophytes

B) No, they haven't

MATCHING

- | | |
|--------------------|----------------------------------|
| 1. Chlorophyll | a) made up of cellulose |
| 2. vascular plants | b) grow in moist, shaded areas |
| 3. plant kingdom | c) have stems, roots, and leaves |
| 4. Mosses | d) green substances |
| 5. cell wall | e) divided into two large groups |

PLANT CHARACTERISTICS

FIND THE WORDS IN THE GRID. WORDS CAN GO ACROSS, UP, DOWN AND IN TWO DIAGONALS.

Ferns, flowering, fruit, leaves, moss, nonflowering, plant reproduction, plant structures, roots, seeds, spores

READ AND COMPLETE ABOUT MOSSES AND LIVEWORTS AND HORNWORTS

Attach - harsh - mountains - moist - stalks

Mosses grow on _____ soil or on rocks, forming a fuzzy mat of tiny green plants. Mosses have leafy _____ and rhizoids. A rhizoid is a nonvascular rootlike structure that helps mosses _____ to surfaces such a rocks and trees. Rhizoids help the plants get water and nutrients. Mosses can grow even in _____ environments. They have been found above the tree line on _____ and can survive even the freezing temperatures or Antarctica.

Liveworts and Hornworts

Flattened - rhizoids - damp - leaflike

Like mosses, liverworts and hornworts are small nonvascular plants that usually live in _____ environments. Liverworts can be leafy and mosslike or broad _____. Hornworts also have broad, flattened _____ structures. Both liverworts and hornworts have _____ to hold them in place.

READ AND WRITE TRUE OR FALSE

Vascular Plants: Vascular plants are more complex than nonvascular plants because they have transport tissue and specialized structures, and this helps vascular plants to live in a variety of environments. These specialized structures include roots, stems, and leaves. Roots absorb water and nutrients from soil, anchor plants down for stability. Stems contain xylem and phloem, transport water and sugar, give support to plant. Leaves are where most of the photosynthesis occurs. There are two categories of vascular plants: Seedless and Seeded, which determines the reproduction methods.

Transport Structures: Within the stem of vascular plants are the xylem and phloem, the specialized transport structures. The Xylem transports water and nutrients from the soil from the roots to the leaves, shown with the red arrow is the larger white openings. The Phloem transports sugar made in the leaves to the other parts of the plant, which is shown by the arrow to the smaller blackish circles. This picture is if you cut a stem across (horizontal) and looked at it under a microscope.

- 1.- Vascular plants are simple plants. _____
- 2.- Vascular plants have transport tissue and specialized structures. _____
- 3.- Stems contain xylem and phloem _____
- 4.- Within the stem of Nonvascular plants are the xylem and phloem _____
- 5.- The Phloem transports sugar made in the leaves to the other parts of the plant. _____
