IV.Read and answer the question.

Note: reef: đá ngầm, coral : san hô, limestone: đá vôi, polyp: sinh vật đơn bào, tentacle: tua cảm

LIVEWORKSHEETS

The Great Barrier Reef is one of the seven wonders of the natural world. It is the world's largest coral reef system and the only living structure seen from space. The coral reef is like a city of separate homes made by tiny sea creatures called coral polyps.

The Great Barrier Reef covers 132,973 square miles along the coast of Queensland, Australia.

It is made up at least 900 separate islands and 2,900 individual reefs.

There are 400 species (different types) of corals in the Great Barrier Reef. Coral reefs are made up of many thousands of individual animals called coral polyps that form colonies.

There are 350 types of hard corals and each polyp has 6 tentacles. Examples are Brain and Staghorn coral. Brain coral can live for 1,000 years and grows almost half an inch (2 cm) every year.

Soft corals like sea whips don't produce a limestone framework to live in and look like brightly colored plants. They have a tentacle and can triple their size in a year.

1. What is the Great Barrier Reef like?

_____.

2. Where is the Great Barrier Reef located?

_____.

3. How many individual reefs are there?

_____.

4. What are coral reefs made up of?

_____.

5. How long can Brain coral live?

_____.
