

Read the text below and answer the following questions. try to answer all the questions.

1. Abu Dhabi // In a country as hot as the UAE, bottled water probably tops the list of most consumed product. This eventually produces vast amounts of waste plastic. Two of the UAE's most prominent water companies have highlighted their commitment to recycling the plastic bottles they produce.
2. Masafi and Al Ain water said they had schemes in place to keep their plastic use at a responsible level. Masafi has been recycling since 2008 when it incorporated it as part of its "key corporate objectives". Aside from promoting recycling internally and through public awareness programs, Masafi grants recycling bins to companies and organizations which request one.
3. "Any UAE school, or any company that is employing 200 plus people, can take the initiative and request the placement of collection bins and hand over plastic bottles for recycling purposes," said Intikhab Alam, who is head of marketing at Masafi.

Through this service, approximately 100 tons of plastic has been collected and sent for pre-processing in Masafi's plant in Ras Al Khaimah, then shipped for recycling in Fujairah where it is reworked into non-food plastic items.

4. "We believe it is the responsibility of companies, consumers and governments to work together to promote recycling as it is important to look after the world we live in."
5. Al Ain, another leading water brand, takes a different approach to reducing waste. "We have redesigned the shape of the Al Ain Water bottle and the new lightweight one is more eco-friendly," a company spokesperson said. "It uses approximately 30 per cent less Pet [polyethylene terephthalate] and plastic in the bottle and cap, which significantly reduces waste."
6. Ms Al Marashi, of the Emirates Environmental Group, said that it is important to make sure that everyone is aware of exactly how to recycle, which begins first and foremost in the separation of plastics from other refuse.
7. "We all need to be a part of the recycling effort," she said. "There is a tendency in our region to place the responsibility on the government," she said, but that is our failure as a whole society when efficient recycling is not carried out.
8. "That's not the correct way to look at it," she said. "When it comes to the environment it is absolutely everyone's responsibility to walk the line. Every individual has their role in it and everyone needs to become involved with recycling."
