

Ibrahim is learning about comments and attribution.

Show how to add comments and give attribution by adding the following comments to the program given below:

Comments
Comments lines: these are important
They make your code easier to understand and maintain
This is "maths.py" which demonstrates some basic math} in Python
First we'll ask the user for 2 numbers.
Now we do some maths
Most computer languages use the asterisk for multiplication
and the forward slash for divide
Now let's print them out
Here I used an ASCII code to get the old-school divide sign

```
1.  #
2.  #
3.  #
4.
5.  print("This program dose some simple maths.")
6.
7.  #
8.  a = int(input("Please enter your first number: ")
9.  b = int(input("Now give me your second number: ")
10.
11.  #
12.  add = a + b
13.  minus = a - b
14.  time = a * b
15.  Divide = a / b
16.
17.  #
18.  print(a, "+", b, "=", add)
19.  print(a, "-", b "=", minus)
20.  print(a, "x", b, "=", time)
21.  print(a, chr(24), b, "=", divide)
```
