

Example 4 Use Angle Measures to Find Geometric Probability

Use the spinner to find the probability of landing in each section.

- a. $P(\text{pointer landing on purple})$: The angle measure of the purple region is 30° .

$$P(\text{pointer landing on purple}) = \frac{30}{360} \text{ or } 8.3\%.$$

- b. $P(\text{pointer landing on green})$:

The angle measure of the green region is

$$P(\text{pointer landing on green}) = \frac{\text{ } }{\text{ }} \text{ or } \text{ } \%.$$

- c. $P(\text{pointer landing on neither yellow nor red})$:

Combine the angle measures of the yellow and red regions:

$$P(\text{pointer landing on neither yellow nor red}) = \frac{\text{ } }{\text{ }} \text{ or } \frac{\text{ } }{\text{ }} \text{ or } \text{ } \%$$
