Science

Topic: Nervous System

The nervous system is responsible for all the activities of the body.

The THREE parts of the nervous system are: brain spinal cord nerves

The job of the brain is to receive information from various parts of the body.

The spinal cord is located in the spine or backbone.

There are THREE main parts or sections of the brain.

The sections or parts of the brain are the cerebrum, cerebellum and medulla.

The function or job of the:

cerebrum- contains centers for the five senses, pain, memory, reasoning and speech.

cerebellum- controls muscles (muscular) coordination and balance.

medulla- controls vital life functions like your heartbeat, breathing, digestion, and blood pressure.
