#### Genealogy is Family History

A family tree is an [ ] that shows how a person is linked by blood or marriage to his or her [ ], whether living or dead. Genealogy is the science of determining who belongs to a particular family [ ]. Genealogy is interesting in its own right: all of us want to know who our relatives are. It is also important for certain legal matters. For example, genealogy plays an important role in laws about [ ]. In cases where the line of descent is not clear, a [ ] determines who inherits any property. Sometimes people try to [ ] their family connections in order to inherit property or because they want the status of being part of a distinguished family. It is the [ ] of the genealogist to make sure that the family tree is drawn accurately: false [ ] are unacceptable. Genealogy is also important because it allows families to [ ] themselves better. To climb your family tree, you must start with yourself.
