

PHOTOSYNTHESIS: Plants absorb water and minerals by the roots and go up the stem to the leaves. Leaves absorb carbon dioxide from the air and release oxygen into the air.

Chlorophyll: A Green chemical contained in the leaves.

POLLINATION: Pollen goes from the stamen of one flower to the pistil of a different, or the same flower. This happens in different ways:

- Insect pollination
- Wind pollination
- Self-pollination

EXERCISES:

1. Explain the process or **photosynthesis**:

2. **CHLOROPHYLL**:

3. Explain the **pollination**:
