

BIODEGRADABLE OR NOT?

Biodegradable materials are capable of decaying or being broken down into very small parts by agents such as bacteria. They help make the soil fertile. **Nonbiodegradable** materials do not decay or take a very long time to decay. Classify the following items as **biodegradable** or **non-biodegradable** by dragging them into the correct bin.

plastic cups	paper cups	apple peels
chicken bones	diapers	dried leaves
used masks	styrofoam	tissue paper
pencil shavings	ballpen	aluminum foil
