

1. Completa los espacios en blanco que aparece en la siguiente operación con números reales.

$$\frac{2}{5} \cdot \left(\frac{3}{5}\right)^{-3} - \sqrt[5]{\frac{1}{32}} + \left[\left(-\frac{1}{3}\right)^2\right]^2$$

$$\frac{2}{5} \cdot \left(\frac{3}{5}\right)^{-3} - \frac{\sqrt[5]{\square}}{\sqrt[5]{\square}} + \left[\left(-\frac{1}{3}\right)^2\right]^2 =$$

$$\frac{2}{5} \cdot \left(\frac{3}{5}\right)^{-3} - \frac{\square}{\square} + \left[\left(-\frac{1}{3}\right)^2\right]^2 =$$

$$\frac{2}{5} \cdot \left(\frac{3}{5}\right)^{-3} - \frac{1}{2} + \left[\left(\frac{1}{3}\right)^2\right]^2 =$$

$$\frac{2}{5} \cdot \left(\frac{3}{5}\right)^{-3} - \frac{1}{2} + \left(\frac{1}{3}\right)^4 =$$

$$\frac{2}{5} \cdot \left(\frac{5}{3}\right)^{\square} - \frac{1}{2} + \frac{\square\square\square\square}{\square\square\square\square} =$$

$$\frac{2}{5} \cdot \frac{\square\square\square}{\square\square\square} - \frac{1}{2} + \frac{\square}{\square} =$$

$$2 \cdot \frac{\square\square\square}{\square\square\square} - \frac{1}{2} + \frac{\square}{\square} = \frac{\square}{\square} - \frac{1}{2} + \frac{\square}{\square} = \frac{\square}{\square} \text{ Respuesta}$$
