Worksheet about types of rocks. Look at the picture of each rock and its description, then drag it to the right box.

This is slate, a foliated rock. It was formed when shale was heated and squeezed.

Rhyolite. The texture is fine with very small crystals.

Diorite. The texture is rough with large crystals (3 or 4 minerals inside).

Limestone. It is formed when pieces of sea animals and there shells accumulate.

Igneous intrusive

Igneous extrusive

Metamorphic rock

Sedimentary rock
