Life Cycles of Animals

A **life cycle** is a series of changes that a living thing goes through during its life.

Eggs

The hen lays and broods the eggs.

Hatchling

A hatchling breaks out of the egg.

Life cycle of a chicken

Adult chicken

When mature, the rooster and the hen mate and reproduce.

Chick

Big feathers start to develop and the chick grows into an adult chicken.

Life cycle of a cat

Newborn kitten

A kitten is born alive by a female cat.

Adult cat

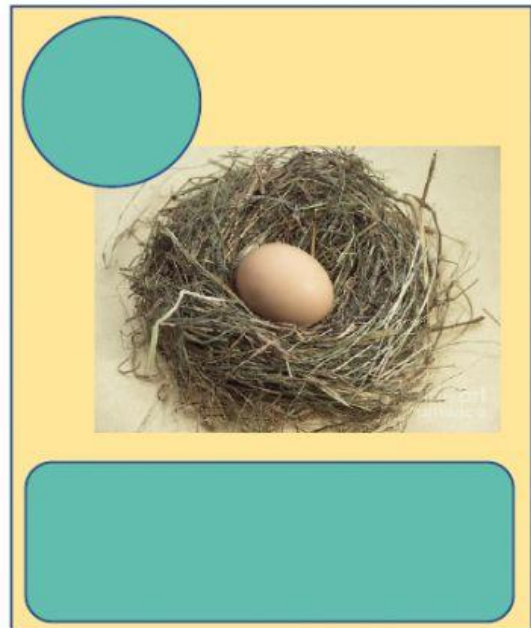

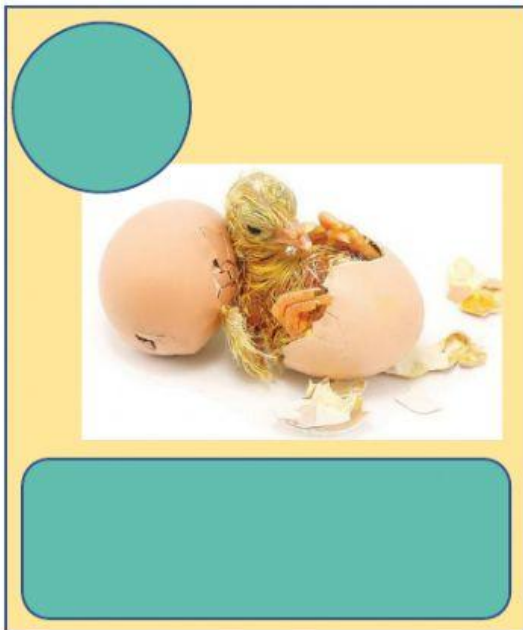

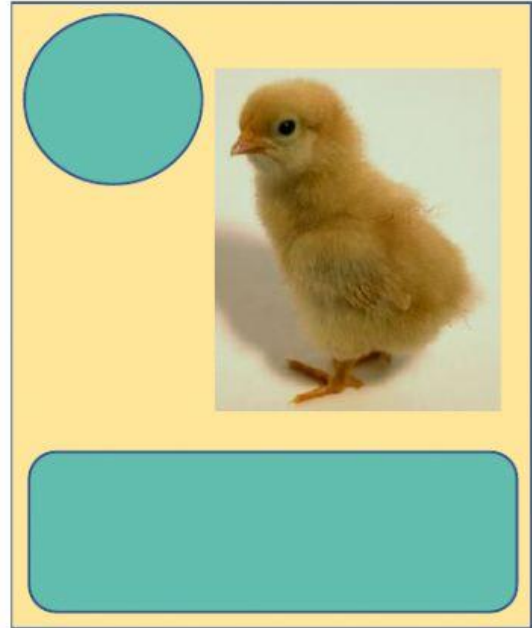

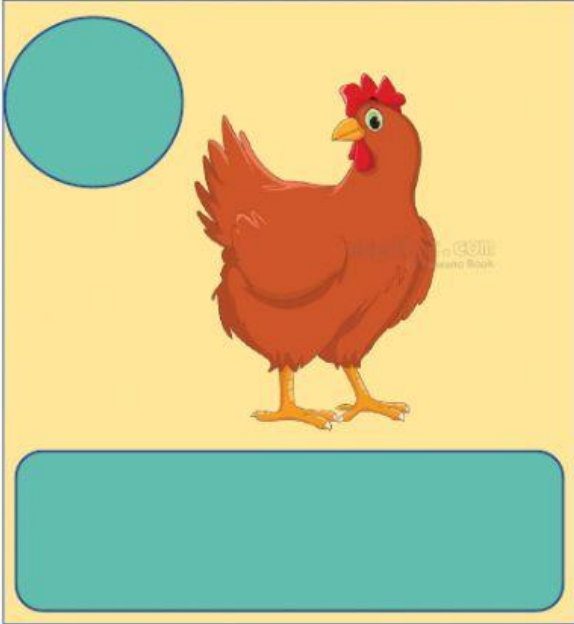

The mature male and female cats mate and reproduce their own offspring.

Kitten

The kitten likes to play around and learn about its environment.

Number and name the stages of animals growth.
