Tick one box.

The A-OK Duke Ranch ☐

White Water Ranch ☐

Black Water Ranch ☐

LIVEWORKSHEETS

PART 5

-7 questions-

Read the story. Write some words to complete the sentences about the story. You can use 1, 2, 3 or 4 words.

Earthquakes

The Earth is made up of big, flat rocks. They are called tectonic plates. They move very slowly. When they move, it can sometimes make the ground move. This is an earthquake.

There are millions of earthquakes every year. Scientists measure the size of earthquakes with a seismograph. This also shows the epicenter of an earthquake – the place where the earthquake is the strongest. Scientists use the Richter scale to compare the size of earthquakes. We don't feel earthquakes that are less than 3 on the Richter scale. An earthquake that is more than 5 can damage buildings. An earthquake that is more than 7 is very dangerous.

After a large earthquake, there are often lots of smaller earthquakes. These are called aftershocks. An earthquake can also cause tsunami, landslides, fires, and floods. So it's important for scientists to learn a lot about earthquakes.

Examples

The Earth is made up of big, flat rocks.

Tectonic plates move very slowly.

1 Scientists measure the size of earthquakes with …….....…...

2 The place where the earthquake is the strongest called the …….....……..

3 We don't feel earthquakes that are less than 3 …….....……..
