

จงแสดงวิธีทำ

1. $2(n + 5) = -2$

วิธีทำ

$$\frac{2(n + 5)}{\boxed{}} = \frac{-2}{\boxed{}}$$
$$\boxed{} + \boxed{} = \boxed{}$$
$$\boxed{} + \boxed{} + \boxed{} = \boxed{} + \boxed{}$$
$$n = \boxed{}$$

2. $7(9 + k) = 84$

วิธีทำ

$$\frac{7(9 + k)}{\boxed{}} = \frac{84}{\boxed{}}$$
$$\boxed{} + \boxed{} = \boxed{}$$
$$\boxed{} + \boxed{} + \boxed{} = \boxed{} + \boxed{}$$
$$k = \boxed{}$$

3. $144 = -12(x + 5)$

วิธีทำ

$$\frac{144}{\boxed{}} = \frac{-12(x + 5)}{\boxed{}}$$
$$\boxed{} = \boxed{} + \boxed{}$$
$$\boxed{} + \boxed{} = \boxed{} + \boxed{} + \boxed{}$$
$$\boxed{} = x$$

4. $-10 = 10(k - 9)$

วิธีทำ $\frac{-10}{\boxed{}} = \frac{10(k - 9)}{\boxed{}}$

$\boxed{} = \boxed{} - \boxed{}$

$\boxed{} + \boxed{} = \boxed{} - \boxed{} + \boxed{}$

$\boxed{} = k$

5. $-243 = -9(10 + x)$

วิธีทำ $\frac{-243}{\boxed{}} = \frac{-9(10 + x)}{\boxed{}}$

$\boxed{} = \boxed{} + \boxed{}$

$\boxed{} + \boxed{} = \boxed{} + \boxed{} + \boxed{}$

$\boxed{} = x$
