Weather on other Planets

If you think the weather on Earth is weird, the weather on other planets is (0) *far stranger* (far / strange). Even though the sun shines (1) ..... (much / weakly) on Mars than it does on Earth, Mars gets (2) ..... (far / many) ultraviolet tanning rays. At the same time, the temperature on Mars is usually (3) ..... (much / cold) than the temperature at our North Pole. That's warm, though, compared to Neptune's (4) ..... (large) moon Triton, which scientists believe is (5) ..... (cold) place in our solar system. Are you looking for somewhere (6) ..... (a little / warm) than Mars? Then try Venus, where the sun is so hot that a picnic lunch would vapourise (7) ..... (almost / quickly) you unpacked it. We might complain about the weather on Earth but it's (8) ..... (by far / good) place to live in our solar system!
