Alkali Metal	Alkaline Earth	Transition Metal	Basic Metal	Metalloid	Nonmetal	Halogen	Noble Gas	Lanthanide	Actinide
--------------	----------------	------------------	-------------	-----------	----------	---------	-----------	------------	----------

Drag the symbols of elements to its place in modern periodic table

Li Ne K Kr Cs Cl Ar Br He F At Fr I Na Xe Rn Rb

Complete the following statments

- Elements of group (1A) are named asand they are amongblock elements
- The valency of alkali metals is....., while the valency of halogens is
- Rubidium and cesiumin water as their densities are.....than water density
- Sodium reacts with water givingand
- Fluorine and chlorine exist in astate,while iodine exists instate
- Halogen molecules aremolecules as their molecules consist ofatoms
- Chlorine can replace andin their salt solutions
- Bromine reacts with potassium iodide giving and
