We all know that men and women have their differences. But do they really think differently? Some people might argue that they don't, but I disagree. In my opinion, men and women still behave in the same way that they were designed to centuries ago. We have different interests, different ways of speaking, of showing how we feel, and of coping with stressful situations.

In today's society, where the sexes are considered to be equal, we sometimes forget how different we are. This can have a negative effect on our relationships. We often become angry or frustrated with the opposite sex because we expect them to behave and communicate like we do.

So why does a man behave as he does? There is evidence to suggest that men were programmed with the instinct to hunt silently for animals. They had to be able to focus their attention on one thing. This might explain why it's so difficult to have a conversation with a man when he's watching TV! And also why he's so good at reading maps and giving directions.

Why does a woman act the way she does? Women are usually very good at multi-tasking (doing more than one job at once), but often find it harder than men to concentrate fully on one thing. In the past, women would have worked in groups, which required a lot of communication, so they're generally more talkative and sensitive to other people's feelings. A woman can return from a party knowing everything about everyone, but a man will probably have discussed less personal topics like football.

Research has shown that men and women use different parts of their brains for language. Women usually score higher in writing tests. Men are seven times more likely to score in the top 5% in scientific exams. They're often talented at problem-solving and making quick decisions, whilst women are good at organization, comforting, and giving advice.

Of course, women still do dangerous sports, and men can multi-task without any problem after a strong cup of coffee! I'm not saying that women and men are not equal; it's just that there are some natural differences – and that's fantastic! We should appreciate and accept them as being what makes us special.

## DNA the reason women see colours better than men

Why are women generally able to see <sup>1</sup> \_\_\_\_\_ colours better than men? Scientists say there is <sup>2</sup> \_\_\_\_\_ reason for this, and <sup>3</sup> \_\_\_\_\_ reason is in our DNA. Our chromosomes contain DNA, which controls many things about us. The ability to see <sup>4</sup> \_\_\_\_\_ colour red is carried by the X chromosome. Men have only one X chromosome, but <sup>5</sup> \_\_\_\_\_ women have two of them. This means that it's easier for women to see red. This was important in prehistoric times when women were looking for <sup>6</sup> \_\_\_\_\_ fruit to eat. They needed to choose <sup>7</sup> \_\_\_\_\_ right fruit, so they had to be able to see <sup>8</sup> \_\_\_\_\_ difference between different colours. If they made <sup>9</sup> \_\_\_\_\_ mistake, they could kill their families and themselves. So, it was more important for women to see different colours, while men had <sup>10</sup> \_\_\_\_\_ other important skills.
