

Adding and subtracting fractions

Solve the following operations:

$$\frac{2}{5} + \frac{3}{7} = \frac{\quad}{35} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{1}{6} + \frac{2}{8} = \frac{\quad}{24} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{7}{10} + \frac{6}{15} = \frac{\quad}{30} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{2}{9} + \frac{3}{15} = \frac{\quad}{45} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{8}{10} + \frac{2}{6} = \frac{\quad}{30} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{3}{4} + \frac{1}{8} = \frac{\quad}{8} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{3}{8} + \frac{6}{10} = \frac{\quad}{40} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$

$$\frac{10}{16} + \frac{4}{20} = \frac{\quad}{80} + \frac{\quad}{\quad} = \frac{\quad}{\quad}$$
