*Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions.*

Our eyes and ears might be called **transformers** since they sense the light and sound around us and turn them into electrical impulses that the brain can interpret. These electrical impulses that have been transformed by the eye and ear reach the brain and are turned into messages that we can interpret. For the eye, the process begins as the eye **admits** light waves, bends them at the cornea and lens, and then focuses them on the retina. At the back of each eye, nerve fibres bundle together to form optic nerves, which join and then **split** into two optic tracts. Some of the fibres cross, so that part of the input from the right visual field goes into the left side of the brain and vice versa. The process in the ear is **carried out** through sensory cells that are carried in fluid-filled canals and that are extremely sensitive to **vibration**. Sound that is transformed into electricity travels along nerve fibres in the auditory nerve. These fibres form a synapsis with neurons that carry the messages to the auditory cortex on each side of the brain.

26. According to the author, we might call our eyes and ears '**transformers**' because \_\_\_\_\_.

In 1877, George Eastman, who was working in a bank in Rochester, wanted to take photographs on holiday. However, he was very disappointed to discover that the only cameras were very large and heavy, and required some use of complicated equipment. Eastman realized that many other people were keen to take photographs but were (33)\_\_\_\_\_ from doing so. What was needed was a simple, hand-held camera, and so, in his spare time, he began to experiment. After a great deal of work he was ready to open a factory and successful in producing his first camera in 1888. It was a small rectangular box and inside was a roll of special paper. This paper was (34)\_\_\_\_\_ to light and replaced the heavy pieces of glass that had been used before. When the roll was (35)\_\_\_\_\_, the camera had to be sent back to the factory in New York where the

photographs to be developed and printed. The following year a transparent film was invented which was better than the paper roll. This could be removed by the photographer and taken to a local center for (36)\_\_\_\_\_.

The new camera was an instant success and within a few years Eastman was very rich. But he was a generous man and during his lifetime he gave (37)\_\_\_\_\_ millions of dollars to support a number of educational institutions.

**Read the following passage and mark the letter A, B, C, or D on your answer sheet to indicate the correct answer to each of the questions.**

The principle of use and disuse states that those parts of organisms' bodies that are used grow larger. Those parts that are not tend to wither away. It is an observed fact that when you exercise particular muscles, they grow. Those that are never used diminish. By examining a man's body, we can tell which muscles he uses and which he does not. We may even be able to guess his profession or his recreation. Enthusiasts of 'body-building' cult make use of the principle of use and disuse to build their bodies, almost like a piece of sculpture, into whatever unnatural shape is demanded by fashion in this peculiar minority culture. Muscles are not the only parts of the body that respond to use in this kind of way. Walk barefoot and you acquire harder skin on your soles. It is easy to tell a farmer from a bank teller by looking at their hands alone. The farmer's hands are horny, hardened by long exposure to rough work. The teller's hands are relatively soft.

The principle of use and disuse enables animals to become better at the job of surviving in their world, progressively better during their lifetime as a result of living in that world. Humans, through direct exposure to sunlight, or lack of it, develop a skin color which equips them better to survive in the particular local conditions. Too much sunlight is dangerous. Enthusiastic sunbathers with very fair skins are susceptible to skin cancer. Too little sunlight, on the other hand, leads to vitamin-D deficiency and rickets. The brown pigment melanin which is synthesized under the influence of sunlight makes a screen to protect the underlying tissues from the harmful effects of further sunlight. If a suntanned person moves to a less sunny climate, the melanin disappears, and the body is able to benefit from what little sun there is. This can be represented as an instance of the principle of use and disuse: skin goes brown when it is used, and fades to white when it is not.

38. What does the passage mainly discuss?
- A. How principles of use and disuse change people's concepts of themselves.
  - B. The way in which people change themselves to conform to fashion.
  - C. The changes that occur according to the principle of use and disuse.
  - D. The effects of the sun on the principle of use and disuse.
39. The phrase 'wither away' is closest in meaning to \_\_\_\_\_.
- A. split
  - B. rot
  - C. perish
  - D. shrink
40. The word **those** refers to \_\_\_\_\_.
- A. organisms
  - B. bodies
