

- _____ 1. The mass of a molecule is found by
- adding the masses of all the atoms in the molecule.
 - dividing the total mass of all the atoms in the molecule by 6.022×10^{23} .
 - multiplying the total mass of all the atoms in the molecule by 6.022×10^{23} .
 - dividing the total mass of all the atoms in the molecule by the total number of atoms.
- _____ 2. For any molecule, formula unit, or ion, the sum of the average atomic masses of all the atoms represented in a formula is the
- formula mass.
 - ionic mass.
 - molecular mass.
 - atomic mass.
- _____ 3. What is the correct formula mass for zinc hydroxide, $\text{Zn}(\text{OH})_2$?
- 83.41 g
 - 99.41 g
 - 83.41 amu
 - 99.41 amu
- _____ 4. One mole of potassium atoms has a mass of
- 1 g.
 - 39.10 g.
 - 78.20 g.
 - 6.022×10^{23} g.
- _____ 5. A compound's molar mass is numerically equal to
- the total number of atoms in the molecule.
 - the total number of moles of the compound.
 - its mass number.
 - its formula mass.
