Chapter 5:

Lesson 5 - Simplify Algebraic Expressions

Independent Practice: Page 391

1. Find the number of terms, identify the like terms, coefficients and constants in each expression.

   9 - z + 3 - 2z

   Number of terms =

   Like terms = and

   Coefficients = and

   Constants = and

2. Simplify each expression.

   (a) 12c - c =

   (b) -4j - 1 -4j + 6 =
