

1. The layers of the atmosphere are separated by:
  - Invisible changes of air temperature.
  - Invisible changes of gases.
2. The layer of the atmosphere inhabited by every living creature is:
  - The troposphere
  - The mesosphere
3. Temperatures in the troposphere are constantly:
  - Changing
  - Increasing
4. The stratosphere contains:
  - The ozone map
  - The ozone layer
5. The ozone layer converts rays from the sun into:
  - Rain
  - Heat
6. The mesosphere is cold because:
  - The ozone layer is not there to heat the temperature.
  - The mesosphere produces snow.
7. The mesosphere protects the earth from:
  - Meteors
  - Pollution
8. The thermosphere is separated into two different sections:
  - The ionosphere and the exosphere
  - The mesosphere and the stratosphere
9. What kind of things can we find in the exosphere?
  - Small meteors
  - Satellites

10. Label the layers of the atmosphere.

STRATOSPHERE

EXOSPHERE

TROPOSPHERE

THERMOSPHERE

MESOSPHERE
